1. Remote I/O Module System Configuration List

Part No.	Specification	Description
GFGW-RM01N	Modbus TCP-to-Modbus RTU/ASCII, 4 Ports	Gateway
GFMS-RM01S	Master Modbus RTU, 1 Port	Main Controller
GFDI-RM01N	Digital Input 16 Channel	Digital Input
GFDO-RM01N	Digital Output 16 Channel / 0.5A	Digital Output
GFPS-0202	Power 24V / 48W	Power Supply
GFPS-0303	Power 5V / 20W	Power Supply

1.1 Product Description

- I. The gateway is used externally to connect with MELSEC-Q series' communication port (Modbus TCP)
- II. The main controller is in charge of the management and dynamic configuration of I/O parameters and so on.
- III. The power module is standard for remote I/Os and users can choose the model or brand of power module they prefer.

DAUDIN CO., LTD.

2. Gateway Parameter Settings

This section details how to connect a gateway to MELSEC-Q series. For detailed information $i \square - GRIDM$, please refer to the <u>iD-GRIDM</u> Series Product Manual

2.1 i-Designer Program Setup

I. Make sure that the module is powered and connected to the gateway module using an Ethernet cable

II. Click to launch the software

III. Select "M Series Module Configuration"

Note:

Set Group 1 as Slave and set the gateway to use the first set of RS485 port to connect to the main controller (GFMS-RM01N)

3. MELSEC-Q series Connection Setup

This chapter explains how to use the GX Works2 program to use the QJ71MT91 module to connect MELSEC-Q series to a gateway module and add a remote I/O module. For detailed information, please refer to the "<u>MELSEC-Q Series Manual</u>

3.1 MELSEC-Q series Hardware Connections

I. The QJ71MT91 module's Ethernet port is at its bottom center and can be connected to the gateway

3.2 MELSEC-Q series IP Address and Connection Setup

I. Launch GX Works 2 and right click on the "Intelligent Function Module" menu under "Project" on the left side. Then click on "New Module" to create a "QJ71MB91" module

New Module	×
Module Selection <u>M</u> odule Type Module Name	MODBUS Interface Module
Mount Position Base No. F Specify start	✓ Mounted Slot No. 1 ▲dknowledge I/O Assignment Y address 0020 (H) 1 Slot Occupy [32 points]
Title setting	
	OK Cancel

II. Launch GX Works 2 and select the "Intelligent Function Module" menu under "Project" on the left side. Then click on "Switch Setting" in the "QJ71MT91" menu

III. Set "IP Address" to the same domain as the gateway domain at 192.168.1.XXX.

POU CONTRACTOR	Target MODBUS Device Head Number	O	4096
E 🛗 Program	Access Points	Ø	10
	Write Setting		The parameter setting concerning writing data to slave.
Local Device Comment	Head Buffer Memory Address	0	3000 h
Bevice Memory Bevice Initial Value	Target MODBUS Device Head Number	0	8192
< >>	Access Points	0	10

- (A) Target Station IP Address is set by default at "192.168.1.20"
- (B) The iO-GRID M station number to be connected
- © From the drop-down menu, select "0505h:Read/Write Holding Registers"
- D Set to 1000h
- D The Target MODBUS Device Head Number is set to 4096
- (F) Read Points
- G Set to 3000h
- (G) The Target MODBUS Device Head Number is set to 8192
- (1) Write Points

Notes:

*iD-GRID *M*'s first GFDI-RM01N has the register address at 1000(HEX) converted to 4096 *iD-GRID *M*'s first GFDO-RM01N has the register address at 2000(HEX) converted to 8192

V. Click on "Auto_Refresh" to set up the internal register for reading and writing

4. Simple Program Demonstration using MELSEC-Q series and ID-GRIDM

The **ID-GRID**'s read register address is 4096, which is D0 for the corresponding internal register of the controller.

And the 10-GRID 's write register address is 8192, which is D300 for the corresponding internal register of the controller.

Therefore, when you want to control the program, you can just use the internal register to control the writing and reading.
